2. A supplier must provide complete and accurate information on the DMEPOS supplier application. Any changes to this information must be reported to the National Supplier Clearinghouse within 30 days.

3. An authorized individual (one whose signature is binding) must sign the application for billing privileges.

4. A supplier must fill orders from its own inventory, or must contract with other companies for the purchase of items necessary to fill the order. A supplier may not contract with any entity that is currently excluded from the Medicare program, any State health care programs or from any other Federal procurement or non-procurement programs.

6. A supplier must notify beneficiaries of warranty coverage and honor all warranties under applicable State law, and repair or replace free of charge Medicare covered items that are under warranty.

7. A supplier must maintain a physical facility on an appropriate site. This standard requires that the location is accessible to the public and staffed during posted hours of business. The location must be at least 200 square feet and contain space for storing records.

8. A supplier must permit CMS, or its agents to conduct on-site inspections to ascertain the supplier’s compliance with these standards.

9. A supplier must maintain a primary business telephone listed under the name of the business in a local directory or a toll free number available through directory assistance. The exclusive use of a beeper, answering machine, answering service or cell phone during posted business hours is prohibited.

10. A supplier must have comprehensive liability insurance in the amount of at least $300,000 that covers both the supplier’s place of business and all customers and employees of the supplier. If the supplier manufactures its own items, this insurance must also cover product liability and completed operations.

11. A supplier must agree not to initiate telephone contact with beneficiaries, with a few exceptions allowed. This standard prohibits suppliers from contacting a Medicare beneficiary based on a physician’s oral order unless an exception applies.

12. A supplier is responsible for delivery and must instruct beneficiaries on use of Medicare covered items, and maintain proof of delivery.

13. A supplier must answer questions and respond to complaints of beneficiaries, and maintain documentation of such contacts.

16. A supplier must disclose these supplier standards to each beneficiary to whom it supplies a Medicare-covered item.

17. A supplier must disclose to the government any person having ownership, financial, or control interest in the supplier.
18. A supplier must not convey or reassign a supplier number or sell or allow another entity to use its Medicare billing number.

19. A supplier must have a complaint resolution protocol established to address beneficiary complaints that relate to these standards. A record of these complaints must be maintained at the physical facility.

21. A supplier must agree to furnish CMS any information required by the Medicare statute and implementing regulations.

22. All suppliers must be accredited by a CMS-approved accreditation organization in order to receive and retain a supplier billing number. The accreditation must indicate the specific products and services, for which the supplier is accredited in order for the supplier to receive payment of those specific products and services (except for certain exempt pharmaceuticals).

23. All suppliers must notify their accreditation organization when a new DMEPOS location is opened.

24. All supplier locations, whether owned or subcontracted, must meet the DMEPOS quality standards and be separately accredited in order to bill Medicare.

26. Must meet the surety bond requirements specified in 42 C.F.R. 424.57(c).

27. A supplier must obtain oxygen from a state licensed oxygen supplier.

28. A supplier must maintain ordering and referring documentation consistent with provisions found in 42 C.F.R. 424.516(f).

Know Your Rights: 
Taking An Active Role In Your Health Care

What is your role in your health care?
You should be active in your health care because your choices affect your care and treatment. You should ask questions and pay attention to instructions given to you by caregivers.
You should share as much as possible about your health with your caregivers. For example, give them a list of your medicines, vitamins, herbs and supplements and remind them about your allergies.

What is an advocate?
An advocate is a personal representative (family member or friend) to be with you and provide support during your care. Your advocate can ask questions when you cannot, remind you about instructions and help you make decisions. Your advocate can ask for help if you are not getting the care you need.
Ask about your state’s laws regarding advocates and if there is a form to fill out to name your advocate.

Can your advocate make decisions for you?
Yes, if they are also your legal guardian or if you signed a legal document giving them the power to make decisions for you. This document may be called a health care power of attorney.

Can other people find out about your disease or condition?
Health care providers must keep some details about your health private. You can sign a form if you want health care providers to share information with others.

What is informed consent?
Informed consent means that you understand your treatment choices and their risks. Your caregivers should help you understand the treatment choices, risks and what will happen if you are not treated. Informed consent is required if you are asked to try any experimental treatment.

Can the organization take pictures or videos of you?
Yes, they can take pictures, videos or other images and recordings to be used for your care or treatment, or to identify you. The staff must ask your permission to use the images or recordings for any other purpose.

What happens if something goes wrong during treatment or with my care?
You have the right to an honest explanation and an apology. These should be made in a reasonable amount of time.

How do you file a complaint?
Contact the state agency that licenses or certifies the health care facility.
Call the health care facility or health system so they can correct the problem.

Contact the Joint Commission with complaints about an accredited organization.

Fire Escape Planning

More Than 4,000 Americans Die Each Year In Fires And 20,000 Are Injured
Deaths resulting from failed emergency escapes are particularly avoidable. The U. S. Fire Administration (USFA), a part of the U. S. Department of Homeland Security, believes having a sound escape plan will greatly reduce fire deaths and protect you and your family’s safety if a fire occurs.

Have a Sound Fire Escape Plan
In the event of a fire, remember, TIME is the biggest enemy and every second counts! Escape plans help you get out of your home quickly. In less than 30 seconds a small flame can get completely out of control and turn into a major fire. It only takes minutes for a house to fill with thick black smoke and become engulfed in flames. Fire can quickly spread to neighboring residences and buildings, putting others at risk.

Practice Escaping From Every Room In The Home
Practice escape plans every month. The best plans have two ways to get out of each room. If the primary way is blocked by fire or smoke, you will need a second way out. A secondary route might be a window onto an adjacent roof or a collapsible ladder - evaluated by a nationally recognized laboratory such as Underwriters Laboratories (UL) - for escape from upper story windows. Make sure windows are not stuck, screens can be taken out quickly and security bars can be properly opened. Also, practice feeling your way out of the house in the dark or with your eyes closed.

Security Bars Require Special Precautions
Security bars may help to keep your family safe from intruders, but they can also trap you in a deadly fire! Windows and doors with security bars must have quick release devices to allow them to be opened immediately in an emergency. Make sure everyone in the family understands and practices how to properly operate and open locked or barred doors and windows.

Immediately Leave The Home
When a fire occurs, do not waste any time saving property. Take the safest exit route, but if you must escape through smoke, remember to crawl low, under the smoke and keep your mouth covered. The smoke contains toxic gases which can disorient you or, at worst, overcome you.

Never Open Doors That Are Hot To The Touch
When you come to a closed door, use the back of your hand to feel the top of the door, the doorknob, and the crack between the door and door frame to make sure that fire is not on the other side. If it feels hot, use your secondary escape route. Even if the door feels cool, open it carefully. Brace your shoulder against the door and open it slowly. If heat and smoke come in, slam the door and make sure it is securely closed, then use your alternate escape route.

Designate A Meeting Place Outside And Take Attendance
Designate a meeting location away from the home, but not necessarily across the street. For example, meet under a specific tree or at the end of the driveway or front sidewalk to make sure everyone has gotten out safely and no one will be hurt looking for someone who is already safe. Designate one person to go to a neighbor’s home to phone the fire department.

Once Out, Stay Out
Remember to escape first, then notify the fire department using the 911 system or proper local emergency number in your area. Never go back into a burning building for any reason. Teach children not to hide from firefighters. If someone is missing, tell the firefighters. They are equipped to perform rescues safely.
Finally, having working smoke alarms installed on every level of your home dramatically increases your chances of survival. Smoke alarm batteries need to be tested every month and changed with new ones at least once a year.

**USE THE SPACE BELOW TO CREATE YOUR FIRE ESCAPE PLAN**

1. Draw a map of your home and include all windows and doors.
2. Mark two ways out of every room.
3. Mark all smoke alarms.
4. Designate a meeting place outside of the home.

Remember to practice your plan at least twice a year.

Advanced Directives

We recognize your right to participate in the formulation of decisions that may affect your care. This includes respecting and conforming to decisions you have made regarding the level of care you desire when confronted with a health or life-threatening situation. These decisions made by you in a legally appropriate manner, defined by the state in which you reside, referred to as ADVANCE DIRECTIVES.

Advance Directives (such as a Living Will, Durable Power of Attorney or Do Not Resuscitate order) give direction to your family and care providers regarding your wish to withhold extraordinary measures to revive you if a cardiac or respiratory emergency occurs.

If you have an Advance Directive, provide us a written copy of your directions. Unless directed otherwise by an Advance Directive, any staff member who encounters an unresponsive patient will call “911” to activate the emergency medical system. Employees of our company may not participate in the withdrawal of life support equipment. If you wish to execute an Advance Directive, inform your physician, attorney, caregiver and support system.

Inform us if your Advance Directive changes so we can update our records. Your decision regarding whether to execute an Advance Directive will never be a condition of providing care or a basis for discrimination for or against you as a patient.

Emergency Preparedness

In case of an emergency:

- **Dial 9-1-1**
- Stay calm and speak clearly.
- Listen carefully and verbally respond to the dispatcher’s questions.
- State your emergency.
- State your address
- STAY ON THE LINE, do not hang up until the dispatcher tell you it is OK to do so.
- If you can, stay by the phone in case the dispatcher needs to call you back.

Preparing For An Emergency

- Refill medications promptly to ensure you have an adequate supply on-hand.
- Have an emergency back-up source/supply for any medical equipment requiring electricity.
- Keep a list of emergency phone numbers, including your medical equipment supplier.
- Have a family member or neighbor check on you if an emergency occurs.
- Arrange for a friend or relative in another town to be a contact for the extended family.
- Listen to daily weather forecasts and be aware of changing conditions.
- Determine an evacuation route and alternatives.
- Have a flashlight and extra batteries nearby for power outages.
- Keep extra blankets in case the power goes out.
- Keep supply of bottled water on-hand.
Preventing Falls At Home

Make Your Home Safer
1. Remove things you can trip over from stairs and places where you walk.
2. Remove small throw rugs or use double-sided tape to keep them from slipping.
3. Keep items used often in cabinets you can reach easily without using a step stool.
4. Have grab bars installed next to your toilet and in the tub or shower.
5. Use non-slip mats in the bathtub and on shower floors.
6. Improve the lighting in your home. As you get older, you need brighter lights to see well. Lamp shades or frosted bulbs can reduce glare.
8. Wear shoes that give good support and have thin non-slip soles. Avoid wearing slippers and athletic shoes with deep treads.

Review Medications
1. Have your doctor or pharmacist review all medicines you take (including non-prescription items such as cold medicines). As you get older, the way some medicines work in your body can change.
2. Some medicine (or combination of medicines) can make you drowsy or light-headed and can lead to a fall.

Begin Regular Exercise Program
1. Exercise is one of the most important ways to reduce your chances of falling. It makes you stronger and helps you feel better. Exercises that improve balance and coordination are the most helpful.
2. Lack of exercise leads to weakness and increases your chances of falling.
3. Ask your doctor or health care worker about the best type of exercise program for you.

Have Your Vision Checked
1. Have your eyes checked by an eye doctor. You may be wearing the wrong glasses or have a condition limiting your vision.
2. Poor vision can increase your chances of falling.
Infection Control & Prevention

It's In Your Hands

Contact with infected body fluids such as blood, urine, feces, mucous or the droplets sprayed into the air when a person coughs or sneezes can spread illnesses from one person to another.

Some infections are spread through items that have been contaminated by drainage from infected sores or discharges from the nose, mouth, eyes or genital/rectal area.

Controlling the spread of infections means interrupting the way illness travels from one person to another.

Washing your hands prevents the spread of colds, influenza, strep and other illnesses.

1. Wet your hands with warm water.
2. Add soap and rub your hands to make a soapy lather.
3. Wash the front and back of your hands, between your fingers and under your nails.
4. Count to 20 or sing “Happy Birthday” to yourself (it takes about 20 seconds).
5. Rinse hands well.
6. Dry hands with a clean paper towel.
7. Turn-off faucet with paper towel.
8. When hand washing is not possible use an alcohol based hand gel (60% or greater).

Maintain a clean environment to keep infections under control.
